Look at the equation below. Is the equation true? Why or why not?

\[
\frac{8}{100} + \frac{2}{10} = \frac{28}{100}
\]

No, because if you add \(8 + 2 = 10\) and \(100 + 10 = 110\), then \(\frac{10}{110}\) is not equal to \(\frac{28}{100}\).
